## Professional Summary

AI/ML & Python Engineer with 1.5+ years of experience building production-grade backend systems, Generative AI applications, and DevOps pipelines. Skilled in Python, FastAPI, LangChain, RAG, FAISS, ChromaDB, PostgreSQL, Docker, CI/CD, and Linux. Experienced in building AI chatbots, ML models, REST APIs, and enterprise applications.

## Education

**B.Tech, Computer Science and Engineering, SASTRA University**

2020 – 2024

Thanjavur, India

*Relevant Coursework:* Data Structures & Algorithms, Machine Learning, DBMS, Software Engineering

**CGPA: 7.4/10**

## Work Experience

### Engineer

Mar 2026 – Present

*L&T Technology Services — Bengaluru, India*

*Promoted from Associate Engineer within 15 months based on performance*

- Built an AI-powered chatbot using Python and FastAPI to automate staff allocation and bench-related query resolution for an internal analytics platform.
- Developed a training management portal for BMRL Metro O&M teams with Admin, Operator, and Maintenance modules using React JS, FastAPI, and PostgreSQL.
- Engineered REST APIs for content upload, quiz assessments, and training data management, improving digital training accessibility across departments.
- Designed workforce analytics dashboards using React JS and FastAPI with SQLite and PostgreSQL for real-time data retrieval.

### Associate Engineer

Dec 2024 – Mar 2026

*L&T Technology Services — Bengaluru, India*

- Designed and developed a T-SCADA monitoring system using Python/FastAPI, integrating CCTV, PIDS, PAS, Radio, and networking subsystems into a unified BMRL Metro platform.
- Engineered real-time alarm monitoring using SNMP traps for proactive fault detection and severity-based alerting.
- Built monitoring dashboards and analytics components using React JS, FastAPI, and PostgreSQL for real-time data operations.
- Containerized and deployed backend services using Docker on Linux environments; supported testing and production deployments.

## Projects

### Internal Policy Chatbot – LangChain & FAISS

*Python, LangChain, FAISS, FastAPI, Streamlit*

- Engineered a Retrieval-Augmented Generation (RAG) pipeline using LangChain and FAISS for semantic document retrieval and contextual question answering over policy documents.
- Applied prompt engineering and deployed the solution using FastAPI with an interactive Streamlit interface.

### Privacy-Preserving Heart Disease Prediction using ML & FHE

*Python, Scikit-learn, Concrete ML, PCA, Google Colab*

- Evaluated 9 ML algorithms across 4 feature-selection methods on the UCI Cleveland Heart Disease dataset; Logistic Regression with Chi-Square achieved 93.44% accuracy.
- Implemented Fully Homomorphic Encryption using Zama Concrete ML for inference on encrypted patient data, achieving 90.16% accuracy.

### Enterprise Document Research Agent – LangGraph & RAG

*Python, LangGraph, LangChain, RAG, FAISS, FastAPI, LLMs*

- Built an agentic RAG system that routes user queries, retrieves relevant enterprise documents, evaluates retrieved context, and generates grounded responses with source references.
- Implemented a LangGraph workflow integrating query routing, document retrieval, relevance grading, tool invocation, and response generation, exposed through REST APIs using FastAPI.

## Technical Skills

**Programming:** Python, JavaScript, SQL

**AI / Generative AI:** LangChain, LangGraph, RAG, Agentic AI, Prompt Engineering, FAISS, ChromaDB, NLP

**Machine Learning:** Scikit-learn, TensorFlow, PCA, Feature Engineering, Concrete ML (FHE), Model Evaluation

**Backend / Web:** FastAPI, REST APIs, React JS

**DevOps / Cloud:** Docker, Git, GitHub, GitHub Actions, Linux, AWS Basics

**Databases:** PostgreSQL, SQLite

## Certifications

Generative AI Fundamentals • Python for AI & ML • IBM RAG and Agentic AI Certification • AWS Solutions Architect (In Progress)
